

Innovations at the fair

Solutions in new dimensions

Leitz will once again be exhibiting at the Holz-Handwerk 2018 in Nuremberg this year. Under the motto “Solutions in new dimensions” we will show you upcoming service concepts and innovations that you can rightly expect from a technology- and world market leader.

With the aim of setting trends through innovative thinking and progressive technology, we will be presenting solutions and concepts at our stand that not

only look at technical progress but focus primarily on the added value for you, the user and the customer. Our “Solutions in new dimensions” not only make your production processes more efficient, flexible and economic, they also offer you perfect machining quality, maximum productivity and sustainability at the highest technical level.

Be curious about our solutions in new dimensions.

We look forward to seeing you.

Service at the push of a button

With our global network of 120 highly qualified service stations, we have created an unequalled high closeness to our customers. Now we put another scoop on top of it. At the trade fair we will be presenting our latest service concept – the LeitzXPRESS Button. Your personal service concept from Leitz provides you with all the advantages you need for your success at the touch of a button!

Reliability – We promise to contact you directly within one hour. No waiting loop and no annoying call-center!

Quality – You can reach your personal, qualified expert advisor and not a parcel driver!

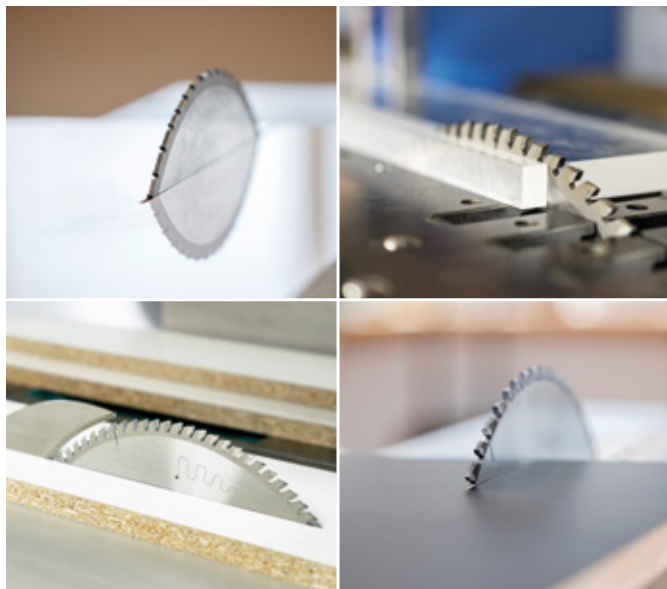

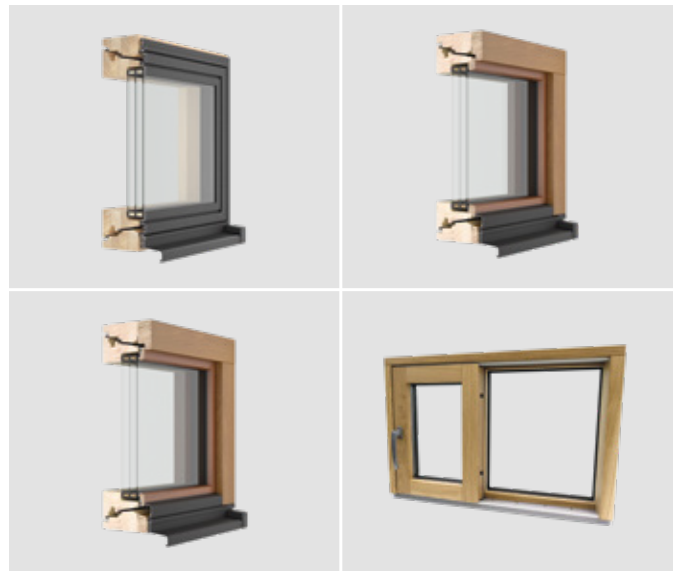

Efficiency – That’s Industry 4.0 and hands-on service.

News from the world of windows and doors

This year again, we will be demonstrating our **knowledge** and competence in the field of window- and door construction.

As one of our highlights, we present our “**ClimaTrend Style**” window system for the highly efficient production of particularly slim and elegant looking wood-aluminium windows in **top quality**.

The second highlight is the new **Patio Inowa** sliding door- and window system, which was launched together with well-known project partners. This is a worldwide unique and high density system, which can also be produced very **efficiently** and economically.

Revised product programme of circular sawblades

With our new revised product programme of circular sawblades, we prove that productivity, quality and sustainability in sawing are feasible.

WhisperCut circular sawblades make it clear that noise protection and productivity in sawing are not necessarily mutually exclusive.

BrillianceCut circular sawblades process transparent plastics in a mark-free finish-cut quality with absolute efficiency.

Katana circular sawblades set a sign in terms of efficiency and flexibility in a wide variety of materials and are now also available for CNC machining centres.

Panel sizing sawblades of the Premium performance class allow up to 30 % longer tool life.

ProfilCut Q Diamond – sustainability, efficiency and productivity

The outstanding ProfilCut Q profile tool system is the undisputed focus of the technology presentation. In the Premium version it is approved for cutting speeds up to 120 meters per second. As a pioneer, the new ProfilCut Q Diamond exchangeable knife head system sets new standards in machining. The unique combination of ultralight aluminium body and resharpenable, constant diameter diamond edges ensures maximum **productivity** combined with significantly higher efficiency.
