Diamaster WhisperCut

**The light and efficient jointing
cutterhead for low-noise sizing
of panel material**

Benefits at a glance

- Significant noise reduction by up to 5 db(A) through an optimized tool body design and minimised weight
- Trouble-free chip clearance plus excellent DFC®-technology chip collection
- Individual application according to the customer's wish; resharpenable or as a replaceable knife system

Diamaster WhisperCut – The jointing cutterhead with resharpenable knives

- Diamond knives can be resharpened in the tool body up to 3 times
- Optional tipping with WhisperCut PLUS-knives (can be resharpened up to 10 times)
- Perfect cutting quality even on demanding panel materials – also after sharpening
- Optimal use of the resharpening area – lower costs per cutting meter
- Service in producer quality

Diamaster WhisperCut – The jointing cutterhead with changeable knives

- Constant diameter
- Quick and easy knife change possible on site
- No complex adjustments needed on the machine
- No tool changing required
- Optimal knife utilization through exchange of the unused knives inside the tool with low material thickness
