

The new
Planer knives MC 33
more economic ■ more efficient

Planer knives MC 33

New high performance coating
a new performance standard
a new planing quality

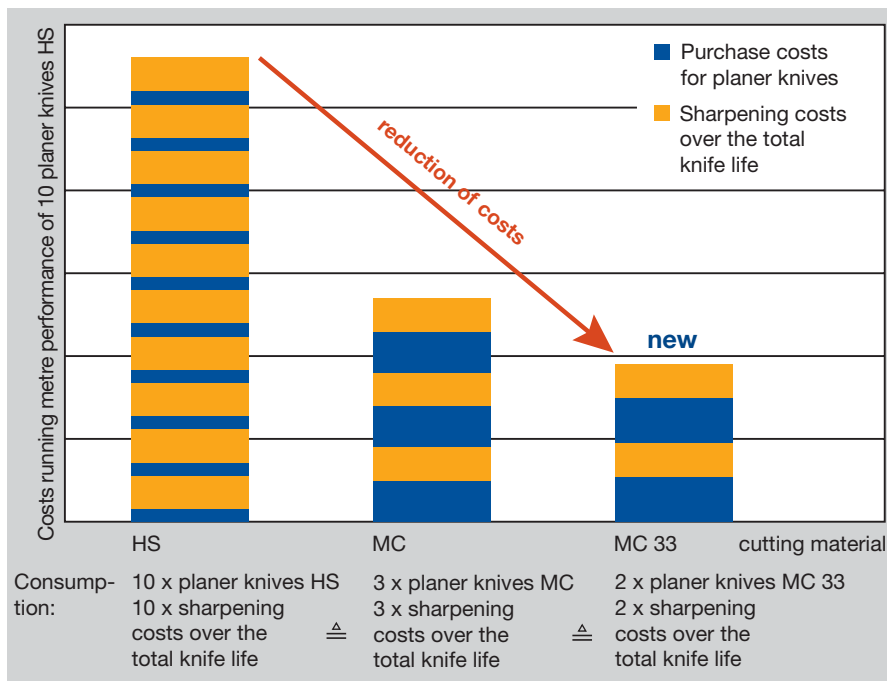

Benefits at a glance

- Up to 6 times longer performance time compared to uncoated planer knives HS
- Up to 30 percent increase in performance compared to conventional coated planer knives MC
- Leitz premium service guarantees weight balanced planer knives

Change up now to planer knives MC 33

Knife costs with the same performance

Your cost advantages

- Significant reduction of purchase and sharpening costs compared to uncoated planer knives
- Further significant cost reduction compared to planer knives MC
- Reduction of set-up time means less machine down time, longer performance time and increased machine utilisation
- Reduction of administration costs

The edge that brings the money

When Leitz introduced extremely hard and wear resistant coatings to planer knives MC some years ago, Leitz achieved a significant increase in performance over uncoated planer knives.

Now, with further development in coatings, Leitz has achieved a new innovation leap: planer knives MC 33. These knives are 30 percent more effective than the Leitz planer knives MC and have up to 6 times the performance time of uncoated standard HS planer knives. The coating gives a longer lasting consistent edge planing quality between sharpens.

Real progress and efficient in several respects

- Reduced tool wear
- Longer performance time
- Reduced sharpening cycles
- Reduced machine set-ups increase the machine utilisation
- Increased output
- Significantly lower production costs
- Universally suitable for softwoods, hardwoods, compound materials or materials similar to wood

Premium service

The premium service of Leitz is characterized by:

- The performance of the coating is maintained after sharpening
- Weight balanced planer knives guaranteed - by the Leitz quality seal
- Higher balance quality ensures excellent planing quality and protects the machine spindle bearings
