

Compact hogger

The reliable cost-efficient machining solution

Cost and quality are factors that play a particularly important role in furniture and panel production. Manufacturers are interested in saving time and money, but at the same time they have to meet, or exceed, customer expectations for quality.

The compact hogger from Leitz contributes hugely to the solution for this challenge. Purchase and service costs can be significantly reduced – without compromising on durability and machining quality. This means that even panel materials with a high recycling content, loose middle layer and/or many mineral components can be processed economically.

YOUR BENEFITS

- Low purchase and service costs
- Longer tool life
- Particularly for panels with high recycling content, loose middle layer or mineral components

AT A GLANCE

- 10 times resharpenable
- Two different tooth shapes
- Suitable for all conventional panel materials
- Quick clamping system or sleeve options
- Available from stock
- Diamond tipped

The compact hoggers from Leitz guarantee high cost efficiency metre by metre, especially when processing furniture parts with thin edges.

+20 %

- EFFICIENCY FOR PANELS WITH HIGH RECYCLING CONTENT, LOOSE MIDDLE LAYER, MANY MINERAL COMPONENTS

10 times

- RESHARPENABLE

2

- DIFFERENT TOOTH SHAPES FOR VERSATILE APPLICATION OPTIONS

Your benefits due to ...

EFFICIENCY

Cost-effective compact hogger with low follow-up costs

- Low purchase costs through cost-efficient design
- Simple and cost-effective repair through optimized tooth geometry
- Economical processing of panels with a high recycling content, loose middle layer and/or many mineral components

PRODUCTIVITY

High performance at low cost

- Long tool life in a wide range of panel materials thanks to the robust construction
- Cutting performance optimally matched to production due to extensive product range
- Long tool life and up to 10 times resharpens

FLEXIBILITY

Wide range of applications on all continuous lines

- You can choose between **tooth shape falling away** for tear-free finishes on panels with loose middle layer or **tooth shape rising** to avoid residual pieces with slight overcut
- Can be used for all common interfaces due to the adaptors being integrated in the carrier body
