

Diamaster PRO EdgeExpert

Highest edge quality on console,
nesting and panel cutting systems

Modern furniture frontals combine elegant design with high durability. However, problems often arise when machining high-gloss surfaces, glass laminates or decoratively coated panels: chipping, damaged edges or frayed protective films – with negative consequences for subsequent production steps.

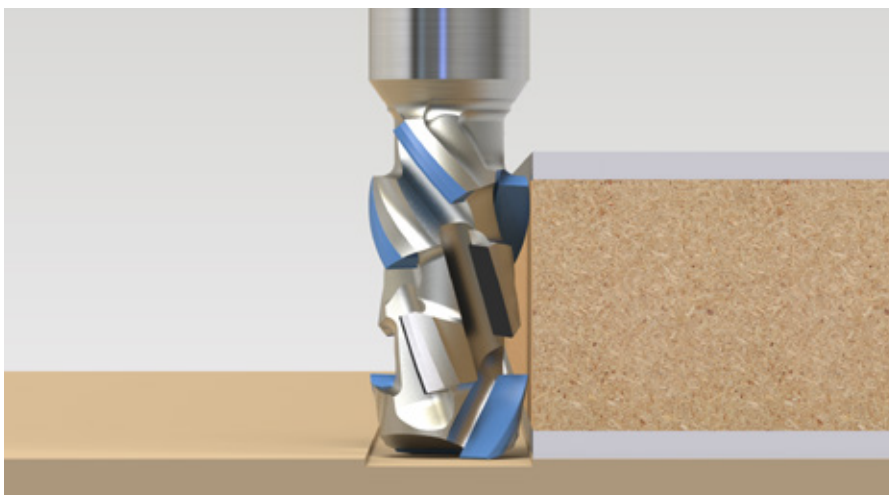

The Diamaster PRO EdgeExpert combines the strengths of a formatting and jointing cutter in one innovative tool. The result: first-class edge quality directly during formatting – on console, nesting and panel cutting systems, even with demanding surfaces.

YOUR BENEFITS

- Highest edge quality right from the formatting stage
- Good chip removal
- High feed rates

AT A GLANCE

- For formatting and joining
- Axis angles for tear-free top layers
- Resharpenable up to 5 times
- Ø12 with NL 24 mm and Ø12 with NL 30 mm
- For panel thicknesses of 16-28 mm
- For console, nesting and panel cutting systems
- For furniture materials with high-quality top layers
- Diamond-tipped

100 %

EDGE QUALITY

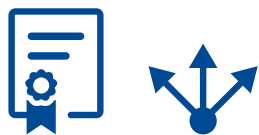

100 %

LESS FRAYING OF THE
PROTECTIVE FILM

Up to 25 m/min

FEED RATE

Your benefits due to ...

QUALITY & FLEXIBILITY

Perfect edges

- No chipping and no fraying of the protective film
- For furniture materials with different top layers
- For formatting and joining on console, nesting and panel cutting systems

EFFICIENCY

Less reworking

- Less waste and reworking by processing the protective film without fraying
- Time savings through higher feed speeds

PRODUCTIVITY & SUSTAINABILITY

Fast, durable and quiet

- For high feed speeds of up to 25 m/min
- Resharpenable up to 5 times
- Good chip removal thanks to large chip chambers
