

Planerhead for structured finishes

Sawn look due to planing

In the construction industry, the demand for rustic timber facades with a rough-sawn look is increasing. Precise four-sided processing is essential so that the timber can be processed accurately and functionally.

The “rough-sawn” look is created by planing. The Leitz planerhead with profiled knives ensures maximum precision and minimum concentricity tolerance. A simple grinding process is sufficient for servicing – without profile grinding. This saves time and reduces maintenance costs.

YOUR BENEFITS

- Defined rough finish
- Less rework
- Simple regrinding
- Long tool life
- Low maintenance costs

AT A GLANCE

- Individual tool design
- Back-serrated planing knives with profile
- Diameter 140-300 mm
- For four-sided planing and profiling machines
- For processing solid wood
- Customised production available at short notice
- Cutting material MC (standard), optional HS

The use of profile planing knives produces facade cladding with a rough-sawn look.

Up to 6-fold

- LONGER TOOL LIFE COMPARED TO UNCOATED HS PLANER KNIVES

Up to 80 %

- LESS SHARPENING COSTS COMPARED TO HS PLANER KNIVES

Up to 80 %

- LESS MACHINE DOWNTIME

Your benefits due to ...

QUALITY

Robust design for the best planing result

- No jamming on the spindle due to special treatment of the spindle surface
- Consistently optimum machining results thanks to perfect concentricity

SUSTAINABILITY

Long-lasting and environmentally friendly

- Optimum utilisation of cutting material thanks to the use of knives with Marathon coating
- Up to 6 times longer tool life compared to HS planer knives due to the use of Marathon planer knives
- Durable support body through special finish treatment

EFFICIENCY

Easy handling

- Easy resharpener of the cutting edges through profiling on the cutting edge face
- User-friendly handling due to radial and axial access to the grease nipple

Planerhead for structured finishes: maximum precision, rustic beauty!
